

SOIL APPLICATION - FRUIT, TREE AND VINE CROPS

General Information

General Information

BRANDT SEQUESTAR 2.5% Mg is a fully chelated solution recommended for the prevention and/or correction of magnesium deficiency in all crops when used as a part of a balanced fertility program.

Mixing and Handling Instructions

Fill mix tank with half of required water volume and begin agitation. Add products in this order, mixing thoroughly after each addition: adjuvants, pesticides, then fertilizers. Fill tank with remainder of water and continue agitation until solution is completely mixed. Check chemical mixture compatibility using a jar test prior to application.

Limitations, Restrictions, and Exceptions

Soil Application: BRANDT SEQUESTAR 2.5% Mg is recommended for use on all types of soils. Because this is a concentrated solution, it should be diluted before use to ensure uniform coverage. Soil applications may be made by drip, sprinkler or furrow irrigation systems or in band or broadcast fertilizer applications. For trees or individual plants, the product may be diluted as above or sprinkled directly on the soil uniformly under the plant's drip line, then watered in. NOTE: The rates given below are based on broadcast application. If broadcast rates are used for spot or banded applications, phytotoxicity may result.
