

## **FOLIAR APPLICATION - FIELD, ROW, VEGETABLE CROPS**

### General Information

#### General Information

BRANDT SEQUESTAR 2.5% Mg is a fully chelated solution recommended for the prevention and/or correction of magnesium deficiency in all crops when used as a part of a balanced fertility program.

#### Mixing and Handling Instructions

Fill mix tank with half of required water volume and begin agitation. Add products in this order, mixing thoroughly after each addition: adjuvants, pesticides, then fertilizers. Fill tank with remainder of water and continue agitation until solution is completely mixed. Check chemical mixture compatibility using a jar test prior to application.

#### Limitations, Restrictions, and Exceptions

Field, Row, Vegetable Crops: Apply 1-2 pints per acre in a minimum of 20 gallons water.

FOLIAR APPLICATION: Avoid applying this product when plants are suffering from moisture stress. If there is any doubt, apply the spray solution to a small test area of the crop or foliage to assess any undesirable effects or phytotoxicity before general application.

Optimum rate of application will vary depending on soil properties (such as pH, organic matter content, texture), weather conditions, time of year, general crop health and crop species. For best results, follow soil or plant tissue test recommendation to monitor specific levels of micronutrients and maintain these levels for optimum plant growth.
