

DRY BULB ONION, ETC. - (WHITE ROT)

General Information

SPRAY VOLUME

ONSET 3.6L may be applied in a minimum of 10 gallons of spray solution per acre by ground sprayer or in a minimum of 5 gallons of spray solution per acre by aircraft spray equipment. Check equipment calibration frequently. Complete coverage and uniform application are essential for the most effective results, especially when lower spray volumes are applied. If necessary, increase the spray volume per acre for complete crop coverage.

OBSERVE THE FOLLOWING PRECAUTIONS WHEN SPRAYING IN THE VICINITY OF AQUATIC AREAS SUCH AS LAKES, RESERVOIRS, RIVERS, PERMANENT STREAMS, MARSHES OR NATURAL PONDS, AND ESTUARIES.

Apply only during alternate years in fields adjacent to aquatic areas listed above.

Do not apply by ground or air within 100 feet of aquatic areas listed above.

Do not cultivate within 10 feet of an aquatic area to allow growth of a vegetative filter strip.

Limitations, Restrictions, and Exceptions

DRY BULB ONION, ETC. - (WHITE ROT)

White rot: For the control of white rot, make one application in the furrow at the time of planting. The infurrow application should be made at the rate of 20.5 fl. oz. ONSET 3.6L per acre. Apply the entire per acre rate in a 4 to 6 inch band over/into each furrow. Additional control may be obtained by including two foliar applications at 4 to 6 fl oz/acre.

General Comments:

For optimum results use as a preventative treatment. Begin applications as soon as crop and/or environmental conditions become favorable for disease development. The lowest labeled rate of a spray surfactant may be tank-mixed with ONSET 3.6L. ONSET 3.6L must have two to four hours of drying time on foliage for the active

ingredient to move systemically into plant tissue before rain or irrigation occurs. After this period of time, ONSET 3.6L will be resistant to weathering. ONSET 3.6L is a demethylation inhibitor (DMI) fungicide (Group 3).
