

MODERATE DEFICIENCY

General Information

PRODUCT INFORMATION

NUTRAPLEX BORON can be applied to most vegetable crops, row crops, deciduous fruit and nut trees, citrus, avocados, grapes, melons, ornamentals, turf, pasture, range grasses, and most other crops.

NUTRAPLEX BORON is a complexed liquid micronutrient for foliar and soil application to agricultural crops. NUTRAPLEX BORON is beneficial in combination with plant food nonphytotoxic when used as directed. It is absorbed through the leafy tissue and root system of the plant and quickly translocated within the plant. NUTRAPLEX BORON is compatible with most insecticides.

NUTRAPLEX BORON can be used with forms of nitrogen fertilizers. NUTRAPLEX BORON can be broadcast on the surface of the soil in water solutions or in particulate form. NUTRAPLEX BORON can be banded at planting time, sidedressed , or sprayed in water solutions directly on deficient plants. Under irrigation, NUTRAPLEX BORON can be added to the water of gravity and sprinkler systems. Under dry land conditions, NUTRAPLEX BORON can be applied ahead of disking, plowing or listing. When applied to soil, NUTRAPLEX BORON can be used in combination with a nitrogen fertilizer source.

AVOID co-application with phosphatecontaining fertilizer solutions.

WARNING: Excess amounts of boron can cause plant injury.

DO NOT OVER APPLY!

Application DIRECTIONS-GENERAL

With pesticides or herbicides ALWAYS add this product to spray tank before adding the herbicide or pesticide. The alkaline water usually encountered in the Western United States will require 1-2 quarts per 100 gallons of spray water.

Avoid foliar applications of this product when plants are under moisture stress. Immediate post-irrigation or post-rainfall applications give best foliar uptake of

micronutrients. Avoid periods of high temperatures or low humidity. Actively growing plants with young leaves absorb micronutrients most effectively.

Addition of nitrogen (for example 5lbs. Lo-bi urea per 100 gallons of spray) will increase efficiency of micronutrient uptake.

Compatibility: This product is compatible with most pesticides except basic products such as lime, limesulfur, basic metal sulfates, metal oxides, etc. A compatibility test is recommended if the desired combination has not been used in the past.

Limitations, Restrictions, and Exceptions

MODERATE DEFICIENCY

- Avoid mixing with phosphate fertilizer.
