

# TREES - SOIL APPLICATION

## General Information

### PRODUCT INFORMATION

Start-up 7% Zinc Chelate Solution was formulated for use with basic starter fertilizers pH 6 or higher at planting time. Start-up 7% Zinc Chelate Solution can be incorporated in basic liquid fertilizers at time of planting, side dressing application, or other situations where it is difficult to get micronutrients to the root zone.

Start-up is composed of organic carriers of Citric Acid which forms a chemical bond when processed.

Zinc generally becomes more available when combined and applied with a good nitrogen source. To insure that maximum zinc uptake is obtained we have incorporated a nitrogen source in our Start-up product line.

### Limitations, Restrictions, and Exceptions

### TREES

Soil Application: 1 - 4 qts. (1 - 4 liters) ZINC CHELATE per tree depending on age. Spread uniformly around the tree and water in thoroughly.
