

ASPARAGUS

General Information

PRODUCT INFORMATION

Custom Mix 0-9-18 is a highly soluble, low salt index formulation developed to supplement standard soil fertility practice. Which provides an additional source of nitrogen, phosphorous and potassium nutrients during the growing season. It is designed to be used in concert with soil and tissue tests and professional recommendations to manage the nutrient levels and nutrient balance within the crop. And is in the form readily absorbed by plant tissue. In this form, nitrogen, phosphorous and potassium can be applied to the growing plant.

Custom Mix 0-9-18 is a highly concentrated nutritional solution. It is designed to meet the need for a soluble liquid minor element spray containing certain nutrients proven to be of value when applied as a properly timed foliage spray. It is completely available for plant food and non-phytotoxic when used as directed. It is absorbed through the leafy tissue of the plant and quickly translocated to deficient areas of the plant. And is compatible with most insecticides and minor elements. It is designed for use as a supplement to a well balanced fertilizer program.

Custom Mix 0-9-18 nutrients can be applied by conventional ground rig. Concentrate sprayer, and by air. With farms becoming larger and more specialized and farmers desiring to get crops planted earlier there definitely is a trend for applying less fertilizer at planting time and broadcasting or side-dressing larger quantities at other than planting time. It is designed to supplement a well balanced fertilizer program and ensure the plants obtain proper nutrients during high growth periods which is so essential to high yields.

Custom Mix 0-9-18 provides a fast method of giving plants a nutrient boost thru leaf absorption. And will protect crops from nutrient deficiencies during those crucial growing periods when any drop in nutrients will result in a production drop.

Custom Mix 0-9-18 nutrients have corrected deficiencies of a great many row crops, vegetables, and ornamental plants under soil conditions ranging from high organic matter (muck) to very low organic matter and from strong acid soils (pH 3) to high

alkaline soils (pH 8.5) containing considerable calcium carbonate (free lime). Custom Mix 0-9-18 can be effective under dry land and irrigation farming conditions. Differences in soil conditions, climate and plant varieties will determine how much more effective Custom Mix 0-9-18 nutrients are than other sources of nutrients.
