

LAWN APPLICATIONS NOT USING YARDFEEDER

General Information

MIX WELL BEFORE USING

EnviroYard feeds herbaceous garden plants, shrubs, trees, cactus, succulents and turf.

Directions For Use: Shake well before use as some settling may occur. Use when establishing new turf/lawns or on established turf where a soil test proves a need for phosphorus. In either case, apply only when turf is actively growing. Do not apply near water, storm drains or drainage ditches. Do not apply if heavy rain is expected. Apply this product only to your lawn/garden. Check with your local Cooperative Extension Agency to obtain specific information on local turf best management practices. Check with your county or city government to determine if there are local regulations for fertilizer use. In Virginia, this lawn/turf fertilizer contains phosphorus and is only for non-agricultural use on (i) turf during its first growing season, (ii) on turf areas being repaired or renovated and (iii) on turf where a soil test performed within the last 3 years indicates a phosphorus deficiency. This fertilizer is not for the routine maintenance of turf.

Limitations, Restrictions, and Exceptions

Lawn Applications NOT Using YardFeeder: Apply 24 fluid ounces of EnviroYard diluted with at least two gallons of water for every 1,000 square feet four to six times a year during the growing season.
