

WEEKS 1-2

General Information

MIX WELL BEFORE USING

Restore is a liquid product designed to help break down organic waste, reduce BOD and reduce odor in waste holding cells.

Directions For Use: Restore is applied directly to holding cells. Since Restore is heavier than water, it sinks to the bottom of the cell where organic solids accumulate.

Application rates below are per 100,000 gallons of holding cell volume (pond, pit, lagoon or similar). Apply Restore at least once per week. During the initial four week of use, a shock treatment is highly recommended and is indicated on the chart below. Pour Restore directly into the holding cell. After eight weeks, weekly maintenance applications may be added upstream to help keep effluent passages flowing freely. Consult your Solutions 4Earth representative before changing application method.

Restore, may be used in concert with anaerobic digestion systems. Restore may be introduced into waste stream before the digestion system to aid in solids removal / flowability. Restore is recommended to be added two times per week splitting the weekly rate.

Limitations, Restrictions, and Exceptions

Rates are general recommendations. Consult with your Solutions 4Earth representative for specific guidance.
