

SPECIALTY USE - FOR LIQUID FERTILIZER BLENDS

General Information

Surf Tack-300 is a concentrated, ionic balance, nanotized, amphoteric bio-based, wetting agent additive. It is designed to use for all types of agricultural based herbicides, insecticides, pesticides, and various water-based products for crops.

UNIQUE FEATURES:

- Eco-friendly, bio-based, and bio-degradable
- Highly adaptive to various ionic charges
- pH balance for various pH sensitive products
- Fast reacting and quicker wetting
- Emulsifies to micro emulsions and highly stable
- Superior drift control and deposition coverage
- Will not harm crops and fruits
- Spray evenly with increased wetting and penetrations
- Very low foaming with wide coverage capability

HELPS THE CROP PROTECTION SPRAY HIT THE TARGET

Surf Tack-300 is a highly concentrated and extremely effective, ionic balance superior wetting agent. It also performs as a drift-control agent and deposition coverage aid that helps crop protection products remain in targeted areas. Effective and easy to use, Surf Tack-300 is compatible with most watersoluble and wet-able powder fertilizers, crop protection products, desiccants, and cotton defoliant. Follow dilution rate and use as directed for best results.

DILUTION AND USE RATE:

Surf Tack-300 is a highly concentrated product with superior wetting capability. Use proper dilution rate for optimum results. Dilution is based on using and mixing with

100 gallon of water.
