

FERTIGATION APPLICATION - LEAFY VEGETABLES

General Information

GENERAL INFORMATION

KENDAL is recommended as a supplement to a well-balanced fertilizer program only. KENDAL when distributed over the entire vegetative cycle, enhances the vigor of cultures, provides an early maturation and improves fruits quality. Thanks to the content of polysaccharides and polypeptides

KENDAL helps plants to develop their endogenous defenses. The specific polypeptide complex of the product neutralize toxins and the vegetative extracts provide quickly available nutrition triggering plant metabolism thereby increasing nutrient uptake resulting in healthier crops.

Limitations, Restrictions, and Exceptions

FERTIGATION APPLICATION - LEAFY VEGETABLES

- Apply KENDAL every 15 days through the growing seasons.
