

CORN (INCLUDING CORN GROWN FOR SEED) - TEXAS

General Information

USE RESTRICTIONS

Do not apply in spray solution above pH 10.

It is best to use COMITE II at pH 7 or lower.

Unless the rotated crop is a registered use for propargite, the following applies:

Do not plant any root crop in rotation within 6 months after last application of propargite to labeled crops.

Do not plant other crops in rotation within 2 months after last application of propargite to labeled crops.

Registered-labeled field and vegetable uses for propargite are:

Beans, dry Jojoba Seed crops only:

Corn (sweet, Mint Alfalfa field and popcorn) Peanuts, Carrot, Cotton, Potatoes, Clover,,Hops, Sorghum, Sugar Beets.

GENERAL INSTRUCTIONS

COMITE II is a liquid emulsifiable concentrate for preparing sprays to control mites.

COMITE II is not systemic in action, therefore complete coverage of both upper and lower leaf surfaces and of fruit is necessary for effective control. COMITE II can be used in concentrate sprays as directed by label.

COMITE II performance is best when day temperatures average above 70°F.

Limitations, Restrictions, and Exceptions

CORN (Including Corn Grown For Seed)

EARLY PLANT BANDING FOLLOWED BY AERIAL APPLICATION: Apply COMITE II at 1¹/₈ pint/acre in 10 gal./acre directed spray to the lower stalk of the plant (14" - 20")

during mite infestation in early season period. A second application of COMITE II at 2 1/4 pints/acre without or combined with other control measures by air application in a minimum of 5 gallons of water may be made as necessary for mid or late season mite control. Complete coverage of both upper and lower leaf surfaces is necessary for effective control. Do not exceed 3 3/8 pints COMITE II per season.

The grazing or cutting for silage within 30 days after treatment is prohibited.
