

FRUIT AND NUT CROP (APPLES, PEARS AND CITRUS) - SOIL APPLICATION

General Information

Direction for Use:

Apply Bioflora Copper alone or in combination with dry or liquid fertilizer for pre-plant, starter or side dress applications. For most effective treatment of row crops, make soil application in a band at planting time or as a side dressing shortly after planting.

For foliar applications dilute Bioflora Copper with water as recommended, this product can be applied as a foliar spray. To ensure even distribution on leaf surface and increase effectiveness of foliar application, a small amount of wetting agent or detergent may be added.

Limitations, Restrictions, and Exceptions

FRUIT AND NUT CROP (APPLES, PEARS AND CITRUS)

Soil Application: Apply per tree depending on soil conditions and size of tree. It is important to spray material uniformly around the tree and water in thoroughly for rapid response.
