

RADISH - ROOT MAGGOT

General Information

RESISTANCE MANAGEMENT

CHLORPYRIFOS 15G contains a Group 1B insecticide. Insect and mite biotypes with acquired resistance to Group 1B may eventually dominate the insect/mite population if Group 1B insecticides are used repeatedly in the same field or in successive years as the primary method of control for targeted species. This may result in partial or total loss of control of those species by the product or other Group 1B insecticides.

The following practices are recommended to delay development of insecticide resistance:

- Avoid consecutive use of insecticides with the same mode of action (same insecticide group) on the same insect species.
- Use tank mixtures or premix product containing insecticides with different modes of action (different insecticide groups), provided the products are registered for use.
- Base insecticide use on comprehensive Integrated Pest Management (IPM) programs.
- Monitor treated insect populations in the field for loss of effectiveness.
- Contact your Local Agricultural Extension Specialist, certified crop advisor, or Manufacturer for insecticide resistance management and/or IPM recommendations for the specific site and resistant pest problems.

RATES OF APPLICATION

Do not apply the product by aircraft at a rate greater than 1 pound chlorpyrifos a.i. (6.6 lbs. of the product) per acre.

Limitations, Restrictions, and Exceptions

RADISH - ROOT MAGGOT

- Apply as an at-plant in-furrow treatment. Place granules in seed furrow with seed at time of planting.

USE PRECAUTIONS AND RESTRICTIONS:

Note:

Pre-harvest interval = Number of days between last application and harvest of treated crop.

Use Precaution and Restriction: The maximum single application rate is 0.5 ounce chlorpyrifos a.i. (3.3 ozs. of the product) per 1,000 feet of row.
