

INSECTICIDES, FUNGICIDES AND ACARICIDES

General Information

USE INFORMATION

HUM-AC 820 is a general purpose non-ionic surfactant of the alkylpolyethoxyethanol type surface active agents. This product is designed for dry climates in which evaporation may affect spray efficacy. This product allows the spray to reach the target without being lost to evaporation. It can be used with most insecticides, fungicides, herbicides, acaricides, defoliants, desiccants and wettable powders to improve performance of the active spray ingredient by giving them more uniform distribution and better wetting of the plant surface.

Limitations, Restrictions, and Exceptions

Variations in conditions of use can cause some variation in the amount of this product required. The minimum required to give a smooth, uniform coverage usually gives the most effective results. Not for aquatic use.

MIXING INSTRUCTIONS

For wettable powders and water-soluble materials, add this product in water before adding pesticide to spray tank. For emulsifiable products, add this product after a good emulsion is formed.
