

# **USE OF LOX DEPOSITION - COVERAGE AND DRIFT RETARDANT**

## General Information

### USE INFORMATION

LOX is an effective, easy-to-use drift control agent for improving deposition and retarding mist and drift in spraying operations for crop applications. This product is compatible with most water-soluble and wettable powder pesticides, desiccants and defoliants when applied by aerial application or standard ground equipment.

This product will retard, but not totally eliminate drift.

### USE PRECAUTIONS

The degree of drift hazard varies with the type of pesticide, application conditions and vegetation near the sprayed area. Consult your Local Agricultural Advisor. Remember, pesticide drift is no accident. Common sense and sound application technology must be followed when spraying pesticides.

### MIXING DIRECTIONS

Always try a small sample batch before making a full tank.

1. Fill the mix tank with pesticide(s) and/or other adjuvant(s).
2. Add this product.
3. When mixing with an aqueous solution (AS) or emulsifiable concentrate (EC), premixing of this product and the AS or EC is suggested. If water is needed for the initial mixing, do not use more than 1 quart of water per acre.
4. Complete the filling of the spray tank.
5. In case of excessive thickening or lumps due to over-agitation or excessive rates of this product, add household ammonia to break up.

### DIRECTIONS FOR USE

Always read and follow the label of the pesticide(s) and additive(s) to be used with this product. Always refer to the pesticide and additive label(s) for additional

restrictions and precautions. Follow the most restrictive label.

### Limitations, Restrictions, and Exceptions

Do not exceed the rate of 5% of this product in the finished spray volume.
