

AERIAL APPLICATION - TURF

General Information

GENERAL INFORMATION:

ChelStar 5.5% Magnesium Chelate is a fully chelated, water-soluble, powdered form of iron EDTA useful for prevention and correction of magnesium deficiency in crops. Soil application is the preferred application method to prevent magnesium deficiency. Foliar application, however, will provide correction when a soil application is impractical.

Limitations, Restrictions, and Exceptions

TURF

- Always apply in sufficient spray volume thorough coverage.
