

AERIAL APPLICATION - TREES AND VINE CROPS (EXCLUDING CITRUS)

General Information

GENERAL INFORMATION:

ChelStar Iron 11 is an DTPA chelated, water-soluble, powdered form of iron, useful for prevention and correction of iron deficiency in crops. Soil application is the preferred application method to prevent iron deficiency. Foliar application, however, will provide correction when a soil application is impractical.

Limitations, Restrictions, and Exceptions

TREES AND VINE CROPS

- Apply Chelstar Iron 11 in sufficient spray volume for thorough coverage (25 gal. minimum) at dormant/delayed dormant before bloom, then after full bloom at 2 to 3 week intervals as needed.
