

## **AERIAL APPLICATION - TURF**

### General Information

#### GENERAL INFORMATION:

ChelStar Iron 11 is an DTPA chelated, water-soluble, powdered form of iron, useful for prevention and correction of iron deficiency in crops. Soil application is the preferred application method to prevent iron deficiency. Foliar application, however, will provide correction when a soil application is impractical.

### Limitations, Restrictions, and Exceptions

#### TURF

- Always apply in sufficient spray volume thorough coverage.
