

DRIP IRRIGATION

General Information

GENERAL INFORMATION

Fulvic 5 is a fulvic acid complex derived from the plant active portions of Leonardite ore. Fulvic 5 is stable over a pH range of 2.0 to 12.0 so it can be formulated with both basic and acidic liquid fertilizer solutions.

Fulvic 5 can be used alone or blended with liquid fertilizer mixtures containing micronutrients.

DIRECTIONS FOR USE

SHAKE WELL OR RECIRCULATE BEFORE USE Fulvic 5 with CropPlex Technology functions as a complexing agent for micronutrients and provides a source of added organic carbon which is necessary for healthy crops. The CropPlex Technology in Fulvic 5 helps improve soil structure, nutrient absorption, stress tolerance, microbial growth, nutrient exchange and seedling growth.

- Fulvic 5 is a soil amendment and not a fertilizer. It should always be used as part of a standard fertility program. Always read and follow label directions. A simple jar test is recommended to confirm compatibility.

MIXING INSTRUCTIONS

Fulvic 5 can be used alone or blended with liquid fertilizer mixtures containing micronutrients. Fulvic 5 can be used with all crops including corn, soybeans, alfalfa, wheat, cotton, sunflowers, grain sorghum, and potatoes.

Limitations, Restrictions, and Exceptions

RECOMMENDED RATES

Drip irrigation: 2 - 4 quarts per acre for plant nutrition three times a year.
