

FOLIAR APPLICATIONS - AERIAL APPLICATION

General Information

GENERAL INFORMATION

MONTEREY MAGNESIUM-ALL 4% can be used for economical correction of magnesium deficiency of vegetables, row crops, deciduous trees and vines, citrus and avocados, and turf and ornamental plants. MONTEREY MAGNESIUM-ALL 4% is formulated to be especially compatible with acidic solutions (pH lower than 7.0). It is effective when used in foliar sprays or in soil applications.

Overhead Sprinkler Fertigation: Inject the recommended dose into at least 1/16 acre inch of irrigation water.

Limitations, Restrictions, and Exceptions

FOLIAR APPLICATIONS:

MONTEREY MAGNESIUM-ALL 4% is recommended at the following rates and dilutions. However, it may be applied at lower rates, depending on crop condition.

Thorough coverage and wetting are needed for optimum foliar spray results. Actively growing plants with young leaves absorb foliarly applied MONTEREY MAGNESIUM-ALL 4% most efficiently. Immediate post-irrigation or post-rainfall applications give best foliar uptake. Addition of urea (for example, 5 lbs. Lo-Bi Urea per 100 gals. of spray solution) will enhance foliar uptake of MONTEREY MAGNESIUM-ALL 4%.

AVOID foliar applications of this product when plants are under moisture stress. AVOID foliar applications to deciduous tree crops during bloom.

CAUTION: Certain crop varieties may be sensitive to foliar applications of MONTEREY MAGNESIUM-ALL 4%. Test applications to part of the crop are advisable to assess the potential for undesirable effects under specific conditions.

Aerial Applications: Use no more than 1 quart of MONTEREY MAGNESIUM-ALL 4% in 5 gallons of water.
