

NORMAL RANGE

General Information

GENERAL INFORMATION

Extend uses the best technology available to improve your applications life span. With Extends unique qualities it is capable of lengthening out the time your chemical remains active. Extend encapsulates your pre-emerge herbicide, insecticide, and fungicide protecting them from UV decomposition. The encapsulation technology makes your chemical last at least a week longer in most applications. Extend is completely safe for in crop use. Extend incorporates our industry leading Padlock drift control technology making Extend an industry leader in drift control, and canopy penetration increasing the effectiveness of all your applications.

DIRECTIONS FOR USE:

- Add Extend first to agitating tank except when using dry flowables then add after they are mixed into water solution.
- For use with Herbicides (including desiccants), Insecticides and Fungicides. Prior to use, read all directions on the label.

Limitations, Restrictions, and Exceptions

- Normal range of use rates can adjust between 1 - 4 quarts/per 100 gal., depending on encapsulation/residual benefit desired.
