

PLUS KRENITE HERBICIDE FOR WEED AND BRUSH CONTROL IN NON-CROP SITES - TEXAS

Limitations, Restrictions, and Exceptions

PLUS "KRENITE" HERBICIDE FOR WEED AND BRUSH CONTROL IN NON-CROP SITES IN THE STATE OF TEXAS

VIEWPOINT herbicide can be tankmixed with "Krenite" herbicide to increase spectrum of weeds and brush controlled in labeled non-crop sites. Apply VIEWPOINT herbicide at rates of 13 to 20 ounces product per acre in a tankmix with "Krenite" at the rate of 1.5 - 6.0 gallons product per acre.

Before using DuPont VIEWPOINT herbicide and Albaugh "Krenite" herbicide read and follow all applicable directions, restrictions and precautions on the EPA-registered label for each product.

IMPORTANT PRECAUTIONS:

Certain species may, in particular, be sensitive to low levels of VIEWPOINT including but not limited to, conifers (such as Douglas fir, Norway spruce, ponderosa pine and white pine), deciduous trees (such as aspen, Chinese tallow, cottonwood, honey locust, magnolia, poplar species, redbud, silver maple, and willow species) and ornamental shrubs (such as arborvitae, burning bush, crape myrtle, forsythia, hydrangea, ice plant, magnolia, purple plum and yew).

Injury or loss of desirable trees or vegetation may result if VIEWPOINT is applied on or near desirable trees or vegetation, on areas where their roots extend, or in locations where the treated soil may be washed or moved into contact with their roots. Consider site-specific characteristics and conditions that could contribute to unintended root zone exposure to desirable trees or vegetation. Root zone areas of desirable trees or vegetation are affected by local conditions and can extend beyond the tree canopy. If further information is needed regarding root zone area, consult appropriate state extension service, professional consultant or other qualified authority.

Injury to or loss of desirable trees or vegetation may result if equipment is drained

or flushed on or near these trees or vegetation, or on areas where their roots may extend, or in locations where the chemical may be washed or moved into contact with their roots.

IMPORTANT RESTRICTIONS:

Do not apply this product in areas where the roots of desirable trees and/or shrubs may extend unless injury or loss can be tolerated.

Root zone areas of desirable trees or vegetation are affected by local conditions and can extend well beyond the tree canopy.

Do not apply this product if site-specific characteristics and conditions exist that could contribute to movement and unintended root zone exposure to desirable trees or vegetation unless injury or loss can be tolerated.

During period of intense rainfall, applications made to roadsides or other non-crop areas, to soils saturated with water, or soils through which rainfall will not readily penetrate may result in runoff and movement of VIEWPOINT. Do not apply VIEWPOINT when these conditions exist.
