

FOLIAR APPLICATION

General Information

General Information

BRANDT UPTAKE ADVANCED is a non-alkaline extracted humic acid solution that may increase micronutrient uptake. This product is slightly acidic, making this formulation compatible with acidic solutions and with non-chelated nutrients such as calcium, magnesium, iron, manganese and zinc.

Application Instructions

This product can be applied any time during the crop cycle, from planting to harvest.

Mixing Instructions

For foliar applications, put 1/3 to 2/3 of total desired water volume in tank. Add recommended amount of product and agitate until thoroughly mixed. Add adjuvant(s) and pesticide(s) if desired and agitate until thoroughly mixed. Fill tank with remainder of water.

For injection into fertigation, drip lines or mixing with concentrates, perform a jar test to evaluate compatibility with chemical mixtures. This product has shown good compatibility with many fertilizer blends including 4-0-8, phosphoric acid, UAN solutions, and micronutrients, including calcium and magnesium solutions. Tank mixtures should be used in a timely manner. Do not mix with 10-34-0 or 11-37-0.

Limitations, Restrictions, and Exceptions

Foliar Applications: Apply 1-4 quarts per 10-100 gallons of water per acre throughout the growing season.
