FOR USE IN LANDSCAPE AND ORNAMENTAL AREAS

Limitations, Restrictions, and Exceptions

For use in Landscape and Ornamental Areas

Vastlan herbicide may be used for the control of susceptible broadleaf weeds, vines and woody plants in Landscape and Ornamental Areas. Apply in these sites only as a directed spray, spot treatments or cut surface applications to target vegetation according to label directions.

Use Precautions and Restrictions:

- Do not apply more than 8 lb ae of triclopyr per acre per year.
- To avoid plant injury to desirable plants, do not allow spray or drift particles to contact foliage of desirable plants, or to contact exposed roots and/or suckers of susceptible desirable trees or shrubs.
- Do not spray when wind is blowing toward desirable herbaceous ornamentals, flowers and gardens near enough to be injured.
- Wait a minimum of 3 weeks after Vastlan applications prior to seeding grasses.
- Do not plant susceptible broadleaf plants in treated areas for a minimum of 120 days.
- Not for use in nurseries or greenhouses

Method

Spot treatment
Directed Spray
Cut Surface Treatment

Restricted Entry Interval

24 hours

Timings

Postemergence (Weed)
