

CORN (FIELD, POP) - HIGH EXPECTED PEST PRESSURE

General Information

GENERAL INFORMATION

Apron XL is a systemic fungicide seed dressing specifically for protection against systemic downy mildews and diseases caused by soil-borne *Pythium* and *Phytophthora* spp. When a rate range is specified, use higher rates of Apron XL when the disease pressure is expected to be high.

For protection against other soil-borne diseases, such as *Rhizoctonia* spp., Apron XL should be applied in combination with other registered seed dressing fungicides.

Note: Apron XL is a systemic fungicide having a specific mode of action. Apron XL could be subject to development of insensitive strains of fungi. Development of insensitivity cannot be predicted. Consult with your State Agricultural Experiment Station or Extension Service Specialist for guidance and ways to control any possible Apron XL insensitive strains of fungi which may occur.

Apron XL may be applied as a water-based slurry with other registered seed treatment insecticides and fungicides through standard slurry- or mist-type commercial seed treatment equipment.

Maximum usage when applying both metalaxyl- and mefenoxam-containing products to the same crop within the same season: Do not apply more than the maximum seasonal total for the active ingredient as stated on the label of the product containing the lowest seasonal total on that crop.

Limitations, Restrictions, and Exceptions

CORN (FIELD, POP)

For *Pythium* seed rot and damping-off protection in field corn and popcorn, apply Apron XL at the rate specified. For a greater spectrum of seedling disease protection of corn, combine Apron XL with Maxim XL, Dynasty, or Maxim 4FS.

Note: Apron XL contains 10.42 grams of active ingredient per ounce.

mg active ingredient per kernel: Based on 1,800 field corn seeds per pound.

Restricted Entry Interval

48 hours

Exception: If the seed is treated with the product and the treated seed is soil-injected or soil-incorporated, the Worker Protection Standard, under certain circumstances, allows workers to enter the treated area if there will be no contact with anything that has been treated.
