

FOR COMMERCIAL USE - FOLIAR GROUND

General Information

Micro-Mix D.L. is designed for foliar use on all crops to prevent or correct micronutrient deficiencies. Proper nutrient management will help maximize crop quality and yield. Foliar fertilization is intended to supplement standard ground fertility programs and will not by itself provide all nutrients normally required by agricultural crops.

Mixing: Micro-Mix D.L. may be mixed with most fertilizers, insecticides and/or fungicides. A compatibility check is recommended. Check with your field representative for specific recommendations. The application of fertilizing materials containing molybdenum (Mo) may result in forage crops containing levels of molybdenum (Mo) which are toxic to ruminant animals.

Limitations, Restrictions, and Exceptions

Directions for Commercial Use:

Ground: Ground application can be via conventional ground sprayer or metered through irrigation. If you have any questions regarding mixing or application rates contact your Agro-K dealer before using this product.
