

AS HERBICIDE PERFORMANCE ENHANCER

General Information

GENERAL INFORMATION

COMBUST is a proprietary blend of high quality surfactants and ammonium sulfates. COMBUST is premium liquid AMS replacement that will enhance the activity of certain post-emergence herbicides. COMBUST also includes defoamers and an-drift aid. The added herbicide performance produced by the use of COMBUST may be more apparent in situations of environment stress.

DIRECTIONS FOR USE:

Add COMBUST to spray tank at the rate specified by the herbicide label and follow directions for use as to rates, timing, procedures, and crop restrictions. Check compatibility of proposed spray mixture in a jar test before large scale mixing. It is recommended that a test area be used when conditions of high humidity or high temperature exist.
