

FOR USE IN AGRICULTURAL CROPS, AQUATIC, ETC.

General Information

PRODUCT INFORMATION

TRAIL HEAD™ is used as a spray adjuvant to improve deposition of spray droplets. TRAIL HEAD improves spreading and reduces the production of fine droplets which are susceptible to movement from the spray pattern.

The degree of drift hazard varies with the type of pesticide, application conditions and the vegetation near sprayed area. This product is intended as a management tool to reduce drift and improve deposition. Common sense and sound application technology must be followed when spraying pesticides.

TRAIL HEAD does not produce large spray droplets like some polymer drift products. Internal cohesion of the components help prevent droplets shearing into fines which move off target.

DIRECTIONS FOR USE

TRAIL HEAD is intended for use with a wide variety of pesticides and sites including but not limited to agricultural crops, aquatic, forestry, industrial, noncrop, right-of way and turf and ornamental. TRAIL HEAD may be used in conventional spray equipment both ground and aerial. TRAIL HEAD is suitable for use with in-line injection mixing systems and air assisted nozzles.

Limitations, Restrictions, and Exceptions

APPLICATION OR USE RATES

Determine proper rate of product based on type of application and type of formulation being used. DO NOT exceed 1% v/v of the spray solution. Product should be the last additive prior to completely filling the spray tank with water.

The addition of an adjuvant to some pesticides, pesticide combinations, and/or fertilizers may cause phytotoxicity to the foliage and/or fruit of susceptible crops or non-targeted vegetation. Prior to the addition of the product to a spray tank mix, the user or application advisor must have experience with the combination and/or must have conducted a jar test for compatibility.
