

AERIAL APPLICATION

General Information

HEXUS AC-L contains a blend of highly-effective water conditioning agents that are specifically designed to minimize the interaction between ions and active ingredients. HEXUS AC-L contains ammonium ions and has been shown to activate glyphosate tank mixes. HEXUS AC-L can be used with any pesticide where interaction with ions may occur and/or ammonium sulfate is recommended in the tank mix. HEXUS AC-L should be used wherever acidifiers and acidic tank mixes are allowed. HEXUS AC-L can be used with herbicides, fungicides, insecticides and many other pesticides. HEXUS AC-L is especially effective when used with weak-acid herbicides such as glyphosate and 2,4-D.

DIRECTIONS FOR USE

HEXUS AC-L does not contain surfactant or oil. If the pesticide label recommends or requires the use of a surfactant or oil, these should be added along with HEXUS AC-L. This product lowers pH into a range which enhances the performance of most weak acid pesticides. Use with pesticides that are compatible with lower pH. Do not use with copper-containing fungicides. Minimize worker exposure by using measures that are required for pesticide handling. HEXUS AC-L may be added before or after the pesticide is added to the tank mix. Although addition beforehand will prevent unwanted interactions, the interaction may be reversed afterward, although addition of larger amounts may be required. Never exceed the highest recommended dose.
