

SPRAY PRESSURE: AERIAL APPLIED BELOW 45 PSI - NOZZLE ORIENTATION: STRAIGHT BACK

General Information

GENERAL INFORMATION

Rappel Drift is an easy-to-use, highly effective drift control agent and deposition aid, for use in ground aerial spraying operations. Rappel Drift is compatible with most water-soluble and wettable powder pesticides, desiccants and cotton defoliant.

DIRECTIONS FOR USE

1. Select correct rate from the rate chart below.
2. Fill mix tank with water. Start to agitate.
3. If additional surfactant or other spray adjuvants are used, they may be added before Rappel Drift.
4. Add Rappel Drift.
5. Add pesticide.
6. Continue to agitate mix tank at least 2 minutes before spraying.

NOTE: The degree of drift hazard varies with the type of pesticide, application conditions, and vegetation near the sprayed area. Remember, pesticide drift is no accident. Rappel Drift will retard, but not totally eliminate the drift.

Limitations, Restrictions, and Exceptions

Amount of Rappel Drift: Amount per 100 gallons of spray solution
