

BAMBOO - GROUND BROADCAST

General Information

BAMBOO

Spray Volume: 10 - 60 gal/acre

Use this product on roadside rights-of way to control or suppress bamboo. Use the higher rate in the rate range for dense stands and larger plants. Mow or cut bamboo and allow it to resprout to have sufficient foliage in order for the spray solution to completely cover the foliage. Optimum control or suppression of bamboo is achieved when this product is applied between August and October (prior to frost). One application of this product plus a surfactant will not eradicate bamboo. Several mowings and applications are required to completely control bamboo.

Apply the specified rate plus a surfactant (1/4 to 1/2% v/v), such as a nonionic surfactant containing 80% active ingredient or more. Using this product without a surfactant results in reduced performance.

Restrictions:

- Do not apply more than a total of 8 quarts of this product per acre per year.

Limitations, Restrictions, and Exceptions

BAMBOO

Spray Volume: 10 - 60 gal/acre
