

## **FOR LAWNS**

### General Information

#### **BONIDE MOLEMAX MOLE & VOLE REPELLENT**

Effectively rids lawns and ornamental planting areas of Moles, Voles, Gophers, Armadillos, Ground Squirrels, and other burrowing animals.

This product can be safely used around children and pets, when used as directed. This product is biodegradable and will not harm lawns, ornamentals, flowerbeds, or other desirable plants.

#### **OTHER PRECAUTIONS**

Do not apply directly to water.

This product is exempt from registration with the Federal EPA under section 25(b) of FIFRA, and as such, is not registered with the Environmental Protection Agency. Bonide represents that the ingredients qualify for exemption from registration under FIFRA.

#### **Limitations, Restrictions, and Exceptions**

#### **DIRECTIONS FOR USE**

Apply 1 lb. of product per 500 sq. ft. and reapply every 2-3 months to ensure consistent repellency. This product can be applied directly from the container or by using a broadcast or drop spreader.

#### **FOR LAWNS**

Locate active mole areas and runways to determine which way to push the moles out of your yard. Next, protect the areas that are not yet invaded by the moles. Then, direct the moles away from the lawn by treating the lawn in stages.

Day 1: Spread the granules over the areas not yet invaded by the moles. Lightly water in the granules for approximately 10-15 minutes after application.

Day 2: Spread the granules over the second area away from the undamaged lawn and towards the boundary of the lawn. Lightly water in the granules for approximately 10-15 minutes on the same area as day 1, PLUS the second area to

get the moles moving.

Day 3: Spread the granules over the third area away from the areas previously applied and towards the boundary of the lawn. Lightly water in the granules for approximately 10-15 minutes on the same areas as day 1 and 2, PLUS the third area.

Day 4: Spread the granules over the fourth area away from the areas previously applied and to the boundary of the lawn. Lightly water in the granules for approximately 10-15 minutes on the same areas as day 1, 2, and 3, PLUS the fourth area.

TIP: Throughout the process, punch holes into the mole tunnels every 4-6 feet and place 2-4 tablespoons of the granules directly into the tunnel.
