

GROUND AND AERIAL APPLICATIONS

General Information

GENERAL INFORMATION

CONTRAST is a spray adjuvant that conditions water to minimize spray tank antagonism and maximizes spray deposition.

CONTRAST reduces fines, improves canopy penetration and spray droplet retention.

CONTRAST is formulated for use with dicamba-based herbicides and does not contain ammonium-based water conditioners.

CONTRAST may also be used with other herbicides, insecticides and fungicides for drift reduction.

Users should always check for tank mix compatibility with specific pesticides.

CONTRAST IMPROVES SPRAY PERFORMANCE

Minimizes spray drift
Conditions water in the spray tank
Increases amount of pesticide delivered to target plants

DIRECTIONS FOR USE

CONTRAST may be used with registered products in the following applications: Agriculture, Forestry, Horticulture, Industrial, Non-Cropland, Ornamental, Right-of-Way and Turf.

Limitations, Restrictions, and Exceptions

USE RATE

For both Ground and Aerial Applications, the Use Rate is 2.5 pounds/100 gallons of water for nozzles generating XC and UC droplets.
