

# SMALL GARDEN - VEGETABLES

## General Information

### Proprietary Process!

Perfect Blend fertilizers are made using a proprietary process that produces a high quality nutrition to soil microbes that are responsible for breaking down minerals for plants while helping to maintain a balanced pH in your soil.

Application Rates - Most crop lands require two applications, one in the spring and one in the fall. High nitrogen crops may require up to three applications during the primary growing season.

### Limitations, Restrictions, and Exceptions

## APPLICATION DIRECTIONS

Small Garden - Vegetables: Apply 2 lbs. along the bottom of a 24 foot section of the seed furrow then cover the fertilizer with a thin layer of soil. Place your seeds on this soil layer then cover the seeds with an additional layer of soil to the depth recommended on the seed package. For hill plants such as squash and potatoes place one cup in the bottom and sides of the planting hole, followed by a layer of soil then the seeds. Cover the seeds with ground level soil and then water.

For legumes, such as beans and peas, less nitrogen is required. Put half as much Perfect Blend, or one cup every 50 feet, for best results. During the growing season apply an additional 2 lbs. every 50 feet after your plants bloom. Work these plant nutrients into the soil around the plant root zone. A good time to do this is when you are weeding or hilling-up your plants. Always water in newly applied fertilizer.
