

FERTIGATION

General Information

GENERAL INFORMATION

KENDAL NEM feeds and strengthens the plant's root system.

DRIP / TRICKLE IRRIGATION

The specific injection equipment and irrigation system must be conform to federal, state, and local regulations pertaining to the fertilization of plants through irrigation system and should be calibrated accurately prior to any application. The irrigation system should operate to achieve maximum distribution uniformity to avoid plant injury and/or ineffectiveness. For best results, apply KENDAL NEM toward the end of the irrigation cycle allowing for sufficient time for the product to be flushed out of the entire irrigation system before turning of the irrigation water. Flush and clean all parts with water including any pumps, hoses or nozzles after use of this product.

Limitations, Restrictions, and Exceptions

DIRECTION FOR USE

Fertigation: Fruit trees and horticultural crops: 0.5-1 gal/acre every 7-14 days, depending on the severity of the root damage and frequency of application.
