

VEGETABLE CROPS, FIELD AND ROW CROPS

General Information

GENERAL INFORMATION: Phloem Copper is a liquid foliar copper fertilizer, for application during primary growth stages. This material contains 0.39 lbs of copper in each gallon. This product is for use in foliar sprays. It is intended to be a supplement to a fertility program. Always monitor crop nutrient needs and responses with a soil, leaf tissue and irrigation water analysis program.

FOLIAR APPLICATIONS:

Phloem Copper may be Foliar applied.

In a clean spray tank, add any dry powders and water and agitate. Add liquid Fertilizers and Phloem Copper last, continuing agitation. Concentration should not exceed 0.50% (volume to volume) in the finished spray solution. Always use enough water for uniform application and to prevent possible plant tissue damage to the intended crop from concentrated droplets. Contact your Source to Source representative for rates when using low-volume and electrostatic sprayers. Apply during the cool part of the day, or when temperatures below 85° F. Do not apply under windy conditions or other conditions that promote fast drying of leaf surfaces.

Maximum Concentration ratio:

Mix 1 pint of Phloem Copper in no less than 25 gallons of water.

PRECAUTIONS:

Agitate prior to use.

Limitations, Restrictions, and Exceptions

VEGETABLE CROPS, FIELD AND ROW CROPS:

Apply 1-2 pints of Phloem Copper per acre up to every 7 days during timings of key nutrient demands, in combination with water and any compatible mineral that may be needed. Do not exceed 6 pints in a 30 day period.
