

SPRAY ADJUVANT

General Information

GENERAL INFORMATION

AG16098 is a unique spray adjuvant, specifically designed to maximize pesticide performance when applying pesticides through nozzles that are classified to produce coarse and ultra-coarse droplet spectrums. AG16098 reduces the amount of spray droplets that have a high potential to move off target in a ground application. AG16098 should be used in conjunction with proper spray equipment selection set-up and use including boom height, nozzle type, size and pressure. Along with good judgment and the proper selection and use of spray equipment, AG16098 can help professional applicators ensure the maximum performance of pesticides.

DIRECTIONS FOR USE

AG16098 may be used when spraying pesticides in a ground application through nozzles that deliver a droplet spectrum that is categorized as coarse to ultra-coarse.

Mixing Instructions

Add AG16098 after pesticides or other adjuvants are added but prior to complete filling of the spray tank. Continue agitation or follow specific tank mix filling and mixing information provided on the herbicide label. Refer to other pesticide labels for additional recommendations or precautions.

Before mixing pesticides with AG16098, conduct a jar test to determine compatibility. Do not mix AG16098 with Class Act Ridion or other products in an induction system or container when all of the products are undiluted.

For Direct Injection: AG16098 can be applied through injection systems where AG16098 is added to one of the system's chemical injection tanks. An in-line mixing chamber is recommended.

Step 1 Add AG16098 to the chemical injection tank.

Step 2 Pump the correct amount of AG16098 into the line.

Step 3 Pump the proper amount of water, pesticide, and other adjuvants into the

line for mixing with AG16098 and chemicals before going into the spray boom.
