

GENERAL USE: HERBICIDES AND DEFOLIANTS

General Information

GENERAL INFORMATION

is a non-ionic, low foaming penetrant. may be used to enhance the activity and effectiveness of agricultural and industrial chemicals.

provides more uniform coverage of spray solutions and aids in penetration. may be used to acidify (lower pH) of spray solutions thus preventing alkaline hydrolysis of pesticides sensitive to high pH. Common sense and sound application technology must be followed when spraying pesticides. is compatible with most pesticides formulations including water-soluble, flowable and wettable powders. Application may be by ground or air.

DIRECTIONS FOR USE

may be used on a wide variety of crops including fruits, vegetables, row crops, citrus, small grains, forage crops, vine crops, or in non-crop sites. Aquatic (including wetlands), Forestry (site preparation and release), Industrial (storage areas, plant sites, and other similar areas including governmental and private lands), Grasslands (including pastures, rangeland and fence rows), Rights-of-ways (utility, railroad and roadsides), Turf (Golf Courses, Parks, and Sod farms), and Ornamentals (container, field or greenhouse). Some pesticides have stated adjuvant use rates. In all cases, the pesticide manufacturer's label should be consulted regarding specific adjuvant use recommendations and that rate followed. Do not add adjuvant at a level that would exceed 5% of the finished spray volume unless otherwise specified by the pesticide label.

NOTE: Before treating a large area, test a small area and observe prior to full-scale application.

CLEAN UP: Rinse spray tank after each use and flush thoroughly. Do not contaminate water sources, by runoff from cleaning of equipment washwaters or spray waste. Dispose of container in proper manner, do not reuse.
