

FRUIT CROPS (INCLUDING CITRUS, GRAPES, AVOCADOS, MANGO, PEARS, AND APPLE) - TRANSPLANT SOLUTION

General Information

PRODUCT INFORMATION

DYNA-Flo 5-15-1 is a complete starter fertilizer that may be used in both transplanted and seeded vegetable crops, fruit crops, turf and ornamentals to encourage early and rapid root development. Dyna Flo 5-15-1 is designed to give maximum availability of phosphorus and other elements during cool or wet conditions and during the early stages of plant growth. Dyna Flo 5-15-1 will stimulate rapid growth by improving uptake of major and secondary nutrients that may be unavailable to the plant due to soil pH or other environmental conditions.

DIRECTIONS FOR USE

Shake well before each use. Dyna-Flo 5-15-1 may be tank mixed with most liquid fertilizers. Do not tank mix with copper pesticides, caustic materials or peroxides. A jar compatibility test should be performed on new or unfamiliar combinations prior to mixing and application. Dyna-Flo 5-15-1 may also be applied through most irrigation systems.

PRECAUTIONS

Avoid getting in eyes, mucous membranes or on skin. Use with adequate ventilation. Keep container capped when not in use. Keep away from children. Use of side-shielded safety glasses and gloves is recommended. Store or ship undiluted product in polypropylene or fiberglass containers. Do not contaminate feed, seed, or water supplies.

Limitations, Restrictions, and Exceptions

Fruit Crops (including citrus, grapes, avocados, mango, pears and apples): Use 1 gallon of transplant solution per tree. Do not use on stone fruit.
