

# **FOLIAR APPLICATIONS**

## General Information

Advance Concentrate is a proprietary composition of natural carboxylic acids secreted by soil bacteria, fungi, and plant roots. These natural acids enhance the solubilization and uptake of plant nutrients by regulating microbial growth and function and by controlling the processes that enhance nutrient availability, uptake, and assimilation.

Advance Concentrate will improve the availability of added phosphates and nutrients as well as increase the availability of phosphorous and other nutrients already found in the soil. In both cases, these nutrients become more available to the crop.

## AGRICULTURAL USE REQUIREMENTS AND USER SAFETY RECOMMENDATIONS

When used in conjunction with pesticides, consult pesticide manufacturer's label for worker protection recommendations. Use of waterproof gloves and protective eyewear is recommended when handling this product.

## AGRICULTURAL USE REQUIREMENTS AND USER SAFETY RECOM

### DIRECTIONS FOR USE

### MENDATIONS

Advance Concentrate may be applied in a number of ways to enhance the solubilization, availability, and uptake of plant nutrients. Advance Concentrate may be applied to the seed furrow at planting as a neat solution or with starter fertilizer, as a foliar spray with plant nutrients, as a side dressing with fertilizer, through drip or center pivot irrigation systems, or impregnated onto dry fertilizer formulations.

Due to variations in materials, soils, waters and other conditions, the optimum use rate may vary. Use in drip line irrigation will help dissolve mineral deposits in the lines. When mixing in fertilizer solutions whether for in-furrow, side dress, foliar, or other applications, make sure Advance Concentrate is mixed well into the base material to ensure even and proper distribution.

## Limitations, Restrictions, and Exceptions

4-10 oz/acre per application in a foliar nutrient solution
