

SOIL APPLICATION

General Information

MaxxGro for Corn is specifically formulated for use on corn crops requiring a balanced fertility program. MaxxGro for Corn contains a trace element package designed to supply the micronutrients required by corn in the precise ratio needed based on crop uptake and efficiency factors specific to the crop. MaxxGro for Corn contains penetration and translocation aids as well as humectants and growth enhancement compounds to enable nutrients to move into the plant system more easily. MaxxGro for Corn is formulated for both soil and foliar applications. It may be applied in foliar applications to growing crops alone or with crop protection or other nutritional products and may also be applied directly to soil alone or with crop protection products or fertilizers. It is ideally suited for use in any starter fertilizer program. MaxxGro for Corn is compatible with most all crop protection and nutritional products and may be applied by conventional, low-volume or air application. MaxxGro for Corn promotes crop health and proper fertility in high level crop management programs and in programs designed to enhance yield and quality.

DIRECTIONS FOR USE

MaxxGro for Corn may be used in soil or through foliar applications. For foliar use, multiple applications are generally more effective than a single application. It is recommended that a soil analysis be used to determine specific application rates. This product is compatible with most pesticides and fertilizers.

MIXING

MaxxGro for Corn is compatible with most crop protection and nutritional products: Follow crop protection label for mixing instructions with nutritional products. A compatibility test is recommended.

If liquid fertilizer is the carrier or other nutritional products are part of the carrier, add them and agitate. When using liquid fertilizer as the carrier or when using other nutritional products as part of the carrier use a quality compatibility agent such as Co-Mix at a rate of 1-2 pts/100 gallons of carrier. Check crop protection labels for language regarding using water slurries with dry or encapsulated products.

Then:

- Put 1/3 Water/carrier in Tank
- Add Crop Protection Products
- Fill tank with balance of water and/or carrier
- Add MaxxGro for Corn
- Agitate

Limitations, Restrictions, and Exceptions

SOIL APPLICATION

MaxxGro for Corn may be soil applied. MaxxGro for Corn may be added to any fertility program and is especially suited for starter programs. Add 1-2 quarts MaxxGro for Corn in starter solution for use either in-furrow or 2 x 2. MaxxGro for Corn may also be broadcast, or banded with water and/or pre-emerge herbicides and nitrogen solutions. Crops with severe deficiencies may require supplemental applications of MaxxGro for Corn to maintain proper concentrations in the soil. For best results when soil applied, split applications should be utilized.
