

## **FOLIAR APPLICATIONS**

### General Information

MaxxGro for Wheat is specifically formulated for use on wheat crops requiring a balanced fertility program. MaxxGro for Wheat contains a trace element package designed to supply the micronutrients required by wheat in the precise ratio needed based on crop uptake and efficiency factors specific to the crop. MaxxGro for Wheat contains penetration and translocation aids as well as humectants and growth enhancement compounds to enable nutrients to move into the plant system more easily. MaxxGro for Wheat is formulated for both soil and foliar applications. It may be applied in foliar applications to growing crops alone or with crop protection or other nutritional products and may also be applied directly to soil alone or with crop protection products or fertilizers. It is ideally suited for use in any starter fertilizer program. MaxxGro for Wheat is compatible with most all crop protection and nutritional products and may be applied by conventional, low-volume or air application. MaxxGro for Wheat promotes crop health and proper fertility in high level crop management programs and in programs designed to enhance yield and quality.

### DIRECTIONS FOR USE

MaxxGro for Wheat may be used in soil or through foliar applications. For foliar use, multiple applications are generally more effective than a single application. It is recommended that a soil analysis be used to determine specific application rates. This product is compatible with most pesticides and fertilizers.

### MIXING

MaxxGro for Wheat is compatible with most crop protection and nutritional products: Follow crop protection label for mixing instructions with nutritional products. A compatibility test is recommended.

If liquid fertilizer is the carrier or other nutritional products are part of the carrier, add them and agitate. When using liquid fertilizer as the carrier or when using other nutritional products as part of the carrier use a quality compatibility agent such as Co-Mix at a rate of 1-2 pts/100 gallons of carrier. Check crop protection labels for

language regarding using water slurries with dry or encapsulated products.

Then:

- Put 1/3 Water/carrier in Tank
- Add Crop Protection Products
- Fill tank with balance of water and/or carrier
- Add MaxxGro for Wheat
- Agitate

Always mix well to insure proper distribution during application

Limitations, Restrictions, and Exceptions

## FOLIAR APPLICATIONS

MaxxGro for Wheat may be foliarly applied. Use 1-2 quarts MaxxGro for Wheat in 10-20 gallons of water per acre per application throughout the growing season.

Additional applications may be needed to correct deficiencies once they occur. For foliar applications, MaxxGro for Wheat can be applied alone or in tank mixes with crop protection and/or nutritional products. MaxxGro for Wheat may be applied with top dress nitrogen applications. The use of tissue tests is highly recommended to monitor levels of trace elements in the crop. Tissue tests will serve as an aid to establish and maintain correct trace element levels for optimum plant growth and will help in avoiding over application. For best results when foliarly applied, split applications should be utilized.
