

APPLICATION AT WEEKLY INTERVALS

General Information

PRODUCT INFORMATION

Dyna Gold Iron is a liquid foliar formulation designed to correct and prevent deficiencies in most crops. If added to the spray tank first, it will aid in lowering the water pH. A jar test to check the compatibilities of unfamiliar or new combinations should be performed prior to mixing and application. The addition of a non-ionic surfactant and /or urea nitrogen will aid in uptake. Do not use this product in aerial or ultra low volume applications in combination with Magnesium nitrate, on spinach or other iron-sensitive crops. Application of only Iron at 1 to 2 pints per acre if deficiency is evident will aid correction.

Limitations, Restrictions, and Exceptions

Dyna Gold Iron should be applied at weekly intervals at 1 to 2 quarts per application in enough water to cover.
