

POST-HARVEST APPLICATIONS

General Information

GENERAL INFORMATION

Cal-Plex 12 liquid calcium is formulated to provide a method to boost plant quality during critical or high growth periods, prevent damage due to weather, and correct calcium deficiencies.

DIRECTIONS FOR USE

Shake well before using

Foliar Application:

- 1) Add amount of water to be used to tank.
- 2) Add Cal-Plex 12 to water and mix.
- 3) Wash sprayer thoroughly after use.

Due to relatively low rates of calcium movement in the plant, multiple applications of Cal-Plex 12 are usually required for season-long protection against calcium deficiencies. The number of sprays recommended will depend upon the severity of the calcium deficiency. Consult your local Certified Crop Advisor for recommendations.

Limitations, Restrictions, and Exceptions

Post-Harvest Applications: Cal-Plex 12 may be used in conjunction with all postharvest sprays, dips or washes where calcium chloride has been proven safe.
