

## **DRIP OR SPRINKLER APPLICATION (FERTIGATION)**

### General Information

#### GENERAL DIRECTIONS

VineAgra® is a concentrated plant food that supplies plant available potassium. Developed to be applied to plant foliage or soil as a fertilizer. Application as a foliage spray may be alone or in combination with an insecticide, fungicide or PGR sprays. VineAgra can be applied by air or ground with a minimum of 10 gallons of water and with sufficient water for good coverage. When mixing, VineAgra should be added and mixed into the tank first. A high quality non-ionic surfactant should always be included in the foliar spray for even deposition and distribution.

**PRECAUTIONS COMPATIBILITY** VineAgra is compatible with most pesticides and fertilizers except products containing calcium and highly acidic materials. A compatibility test is recommended if the combination has not been used before.

### Limitations, Restrictions, and Exceptions

#### Drip or Sprinkler Application (Fertigation):

Apply 5 to 15 gallons per acre per application. For best results, make 2 to 5 applications per season. In grapes, use from pre-bloom through berry softening and post harvest. A compatibility test with your irrigation water is recommended before use.
