

VEGETABLE AND FRUIT CROPS: ASPARAGUS, BEANS, CARROTS, ETC.

General Information

GENERAL DIRECTIONS

VineAgra® is a concentrated plant food that supplies plant available potassium. Developed to be applied to plant foliage or soil as a fertilizer. Application as a foliage spray may be alone or in combination with an insecticide, fungicide or PGR sprays. VineAgra can be applied by air or ground with a minimum of 10 gallons of water and with sufficient water for good coverage. When mixing, VineAgra should be added and mixed into the tank first. A high quality non-ionic surfactant should always be included in the foliar spray for even deposition and distribution.

PRECAUTIONS COMPATIBILITY VineAgra is compatible with most pesticides and fertilizers except products containing calcium and highly acidic materials. A compatibility test is recommended if the combination has not been used before.

Limitations, Restrictions, and Exceptions

Vegetable and Fruit Crops (Asparagus, Beans, Carrots, Celery, Cole Crops, Cucurbits, Eggplant, Garlic, Onion, all Leafy Vegetables, Root Crops, Peppers, Potatoes, Sweet Corn, Sweet Potatoes, Tomatoes, Strawberries):

Apply 2 to 4 quarts per acre per application.

For best results, make 1 to

4 applications per season starting at pre-thinning (or after transplants become established), then repeat every 2 to 3 weeks.

For flowering

crops, make additional applications at pre-bloom, and again in 2 to 3 weeks.

For strawberries, make continuous applications at 10 to 15 day intervals beginning at pre-bloom.
