

# **TREE, VINE AND FRUIT CROPS; FIELD CROPS; AND VEGETABLE CROPS**

## General Information

### GENERAL INFORMATION

NutriSync Zinc is a plant nutrient solution that contains a proprietary combination of anhydrous ammonia and zinc, in a super soluble, neutral pH formulation. When used as a supplement to a regular fertilizer program, this product may improve vigor, quality, production and stress tolerance in a broad range of crops. It will not by itself provide all the nutrients normally required by crops.

NutriSync Zinc is designed for foliar applications.

General information for these applications is provided on this label. Consult current product bulletins for additional information.

### EQUIPMENT

Brass, copper and galvanized metals may be subject to mild corrosion from prolonged or repeated contact with this product.

### COMPATIBILITY

NutriSync Zinc can be applied alone or with other compatible spray materials. Ammonium polyphosphate fertilizers tend to be more compatible than orthophosphate types. Including some polyphosphate in the mixture often improves compatibility of orthophosphates.

Proposed mixtures should be evaluated in a jar test before full scale use. Fertilizer based mixtures that also contain pesticides should be sprayed as soon as possible.

Note: When combining NutriSync Zinc with phosphate fertilizers vigorous agitation is required for good product mixing. See mixing directions in the label for more information.

## Limitations, Restrictions, and Exceptions

### OTHER CROPS

Apply as early in the growing season as possible, providing there is adequate leaf coverage.

NOTE: Not all of the micronutrients in this product are necessary for all crops grown in Wisconsin that are listed on this label.
