

WATER CONDITIONING AGENT

General Information

GENERAL INFORMATION

AP BLEND PRO is a water-conditioning agent, that is formulated to enhance pesticidal performance. Hard water cations and high pH can decrease mixability and solubility of certain pesticides. AP BLEND PRO contains buffering and chelating agents which aid in maintaining the right pH in the tank mix solution and block hard water cations from interacting with the pesticide molecule.

DIRECTIONS FOR USE

Note: AP BLEND PRO does not replace the need for crop oil concentrate or nonionic surfactant. For specific rates of a COC or NIS, always refer to the pesticide manufacturers' label. Prior to use, read and follow all directions on this label and on the label of the pesticide being used. The pesticide manufacturer's label for specific usages and restrictions have precedence over DIRECTIONS FOR USE referred to on this label

MIXING

All spray mixing and application equipment must be thoroughly cleaned before pesticides are applied.

1. Fill spray tank half full of water and start agitation.
2. Add desired rate of AP BLEND PRO to water before adding pesticides
3. Add pesticides as directed by the label, while maintaining agitation.

Limitations, Restrictions, and Exceptions

Add 2 to 3 quarts of AP BLEND PRO per 100 gallons of spray water (0.5 - 0.75% v/v)
