

# OUTDOOR TREATMENTS - FLYING INSECTS

## General Information

### HOW TO USE BASF CRACK & CREVICE INJECTION SYSTEM

CRACK & CREVICE TREATMENTS: Use only with the supplied actuator and injection tubes. Inject into cracks and crevices or void spaces where insects may be harboring, living and breeding. Place injector tip into cracks, crevices, holes and other small openings. Release approximately 1 sec of product. For light infestations, move injector tip along cracks while treating at the rate of 3 ft/sec. For heavy infestations, move injector tip along at 1 ft/sec. For closed voids, calculate the void's cubic area and treat at the rate of 5 to 10 sec/3 ft<sup>3</sup>. Several holes may be required in long running voids.

SPOT TREATMENTS: To make a spot treatment, release product onto the surface. DO NOT exceed 2 ft<sup>2</sup> for each spot treatment.

## Limitations, Restrictions, and Exceptions

### OUTDOOR TREATMENTS

FLYING INSECTS: Treat outside surfaces of screens, doors, window frames or wherever these insects may enter the room. Also treat surfaces around light fixtures on porches, in garages, and other places where insects light or congregate.

Treat normal fly resting areas such as ceilings, upper corners of the area, around windows and doors, light fixtures and other surfaces known to attract flies. Hold can 1 to 2 ft from target surface and apply at the rate of one 20 oz can/250 to 375 ft<sup>2</sup> of surface area. Treat so as to lightly moisten the target surface. For best results, initiate treatment at the beginning of the fly season and repeat weekly during periods of heavy fly activity.
