

# **TURF - FAIRWAYS, LAWNS, PARKS - LIGHT**

## General Information

## Directions for Use

Turf Application tips: Flat fan spraying tips are recommended when applying Turf Mark. Increased volumes of spray solution should be used when Turf Mark is applied to hard-to-mark areas. Longer or thinner stands of turf or sod may be more difficult to mark due to the non-uniform marking surface. Increasing the total volume of spray solution applied to those areas should reduce marking difficulty.

Experimentation with the volume of spray solution and rate of Turf Mark applied per acre or area should allow each applicator to establish a rate that is functional and economical for each application. The more Turf Mark used, the darker the spray pattern.

## Termiticide Pretreatment Applications tips:

Turf Mark is intended as a marking aid by licensed pest control technicians to identify where structural pesticides have been applied. This product may stain certain surfaces in pretreatment applications. The pest control operator and application technicians should take all necessary precautions to avoid and prevent staining of non-target structural and other construction surfaces.
